This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.
Mark scheme abbreviations

; separates marking points
/ alternative answers for the same point
R reject
A accept (for answers correctly cued by the equation, or by extra guidance)
R reject
A accept (for answers correctly cued by the question, or by extra guidance
AW alternative wording (where responses vary more than usual)
underline actual word given must be used by candidate (grammatical variants accepted)
max indicates the maximum number of marks that can be given
ora or reverse argument
mp marking point (with relevant number)
ecf error carried forward
I ignore
AVP alternative valid point
1 (a) arrow towards food web box ;

(b) respiration ; A respiring

(c) saprophytic/ saprobiotic/ saprotrophic ; A saprobic A detritivore
    ammonifying/ putrefying ;
    bacteria ; A bacterium R nitrifying/ denitrifying, bacteria
    fungi ; A fungus

(d) excretion ; A excrete A urination/ urinating A release/ AW, of urine
    egestion ; A egest/ defaecation A release/ AW, of faeces
    death ; R decay A death and decay A dying

    idea of shed body parts ; e.g. leaf fall/ shed petals/ fruit drop/ moulting

[Total: 5]
2 (a) A = nucleus ; R nucleus R nuclear  R nuclei

B = chloroplast ; A chloroplasts

C = vacuole ; A vacuoles A large / central / AW, vacuole [3]

(b) both must be correct

microvillus / microvilli
centriole / centrioles
cilium / cilia
flagellum / flagella

any two structures for one mark ; A lysosome(s) [1]

(c) 1 apoplast = cell wall (and intercellular spaces) (pathway) ;
A between cell walls
R if cell wall and, cytoplasm / vacuole / plasmodesmata
R if linked to osmosis / facilitated diffusion / active transport

2 symplast = cytoplasmic (pathway) ; R if facilitated diffusion / active transport
reference to only cytoplasmic / not including vacuoles

mps 1 and 2 allow one mark only if no ref. to terms apoplast and symplast
e.g. cell wall v cytoplasmic pathway

symplast

3 osmosis, linked to passage across membranes ; must be in correct context

4 detail of membranes involved ; either tonoplast / vacuolar membrane or cell
(surface) membrane of, ‘first cell’ entered directly from xylem / AW

5 via plasmodesmata ; ignore ref. to mechanism

6 (includes) vacuolar pathway / (through) vacuoles ;

apoplast

7 non-living pathway ; ora

8 ref. greater volume / higher rate / less resistance / AW ; ora
A faster / fastest R amount for volume

9 ref. to, hydrogen bonding / adhesion, to cell walls ; [max 4]
(d) (i) (maintain) turgor/turgidity/prevents flaccidity/prevents plasmolysis;
   \(A\) provides support for cell \(R\) provides support for plant
   A pushes chloroplast to edge (of cell)

   (reactant in) photosynthesis;

   hydrolysis (reactions); A named reaction that involves hydrolysis solvent
   A (medium) for cell, metabolic/chemical, reactions (to take place)
   R if in context of outside cell or entering cell or as a transport medium [max 2]

(ii) (part/used in synthesis, of) chlorophyll (molecule);
   R gives chlorophyll green colour

   in translation/joining of large and small subunits (of ribosomes);

   enzyme, cofactor/activator/described; idea of role in enzyme catalysis
   A correctly named enzymes, e.g. DNA polymerase

   AVP;
   e.g. stabilizing, cell wall/proteins/nucleic acids/membranes;
   important in energy transfers/ATP synthesis;
   DNA, synthesis/replication;
   ref. to role in, light absorption/capture (for photosynthesis); [max 1]

[Total: 11]
3 (a) trachea and bronchi/bronchus; A windpipe for trachea
R if bronchioles also included

(b) (i) (as altitude increases), both of them/atmospheric pressure and oxygen partial pressure, decrease;
(one) correct comparative data quote;
altitude and pressure, with units once, for either atmospheric pressure or oxygen partial pressure

non-linear decrease; A almost linear decrease
decrease in oxygen partial pressure proportionate to decrease in atmospheric pressure;

(ii) difference of/reduction of, 34 kPa;;
A 33/35 kPa
A – 34/35/33, kPa
A 33/34/35% decrease for two marks only if evidence of kPa in working

100 kPa at sea level – 66 kPa at 3500 m A 65/67 kPa
one mark only if correct answer but no units/kPa
one mark if correct values taken from graph but no subtraction carried out
one mark if 3500 m value read as 63 kPa, so answer stated as 37 kPa
(c) lower, atmospheric pressure/partial pressure of oxygen so

lower partial pressure of/less/AW, oxygen in, alveolar/inspired/inhaled, air;
A breathed in for inspired
A less oxygen goes into lungs
decreased, diffusion/concentration/pressure, gradient;

between, alveolus/alveoli, and capillary;

less/AW, oxygen, enters/AW (pulmonary) capillaries/the blood;
A less/AW, oxygen, transported/AW, by, haemoglobin/red blood cells/blood
(to tissues)

(so) percentage saturation of haemoglobin is lower;
A haemoglobin is less saturated
A fewer molecules of/less, oxygen combine with haemoglobin

(as) haemoglobin has lower affinity (for oxygen than at sea level) ; AW
A ref. to effect of 2,3 DPG
allow correct explanation in terms of oxygen dissociation curve

ref. to insufficient red blood cells to compensate;
ora e.g. more red blood cells, need to be/will be, produced [max 4]

(d) (i) greater concentration of/(proportionately) more/AW, red blood cells
(through pulmonary capillaries per unit time)/AW ;
A haemoglobin for red blood cells

increases, the haematocrit/the percentage of red blood cells to the total
blood volume/AW ; [max 1]

(ii) more, blood/red blood cells, flowing to lungs (per unit time) ;
A blood flows faster to lungs
to maximise oxygen uptake (from alveoli)/takes in more oxygen/AW
/compensates for lack of oxygen;
much blood pumped through, systemic circulation (per unit time)/rest of
body/to tissues/AW ; A blood flows faster for more blood

compensates for the lowered plasma volume
or
ref. need to, maintain supplies of required substances/remove waste/
prevent decrease in pH ;
allow named required substances e.g. glucose/oxygen/amino acids
allow named waste substances e.g. carbon dioxide [max 2]
### Mark Scheme

<table>

<th>Description</th>
</tr>
</thead>
</table>
| (e) 1 | nucleotide/base, sequence of, DNA/*gene*, changed/*AW*;  
A new allele (formed) |
| 2 | base substitution (mutation)/(DNA) thymine replaced by adenine/(DNA is)  
CTC to CAC/CTT to CAT (template codon);  
*this cannot be used for mp 1 as well* |
| 3 | altered/changed, mRNA codon; *(allow codons)* A idea of different mRNA  
R altered genetic code |
| 4 | (mRNA codon is) GAG to GUG/GAA to GUA; |
| 5 | glutamic acid, substituted/replaced/*AW*, by valine; A glutamate  
A glu and val |
| 6 | tRNA/*anticodon*, with different amino acid (to ribosome);  
A tRNA with different anticodon |
| 7 | AVP;  
e.g.amino acid substitution at position 6  
valine, hydrophobic/*AW* (R-group)  
glutamic acid, polar/*AW* (R-group)  
[max 3] |
