Mark Scheme (Results)

Summer 2017

Pearson Edexcel GCE
In Biology Spec A (9BN0) Paper 01
The Natural Environment and Species Survival
Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world’s leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere
Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We’ve been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| 2(c)(i)         | A description that makes reference to three of the following:  
- chloride ions leave cells (through the CFTR channel protein) (1)  
- sodium ions leave the cells (following the chloride ions) (1)  
- increasing the solute concentration in the mucus (1)  
- water moves out of the cells by osmosis (into the mucus) (1) | NOT active transport of chloride ions  
ALLOW chloride ions move into the mucus  
ALLOW NaCl, Na⁺ or Cl⁻ instead of solute  
ALLOW description of osmosis | 3 |

| 3(a)            | A description that makes reference to three of the following:  

- (large) circular DNA (1)  

- DNA not associated with histone proteins (1)  

- (small / several ) plasmids (1)  

- located in the cytoplasm / not inside a nucleus (1)  

ALLOW nucleoid  
NOT two marks for plasmids are circular DNA | | 3 |
| 3(b)(i)         | • correct values taken from the graph (1)  

• correct answer with units (1)  

Example of calculation  

55 – 45 (= 10)  

= 2 au min⁻¹  

ALLOW an answer between 1.6 au and 2 au per minute  

or  

0.0267 to 0.0333 au per second  

Correct answer with units, with no working gains full marks  

Correct answer with no units, gains one mark only | | 2 |

| 3(b)(ii)        | An answer that makes reference to the following:  
|                 | • DNA contents doubles twice / two stages of DNA synthesis (1)  
|                 | • therefore two divisions (1) | ALLOW two increases in uptake of bases  
|                 | ALLOW twice | 2 |
| 3(b)(iii)       | An explanation that makes reference to two of the following:  
|                 | • because thymine is found only in DNA (1)  
|                 | • other radioactive bases taken up by all nucleic acids (1)  
|                 | • only DNA would be measured (1) | ALLOW RNA does not contain thymine  
|                 | ALLOW other bases taken up by RNA  
|                 | ALLOW no need to separate DNA from RNA | 2 |
| 3(c)            | An answer that makes reference to the following:  
|                 | • tetracycline { is bacteriostatic / stops bacteria dividing } (because the number of bacteria stays the same) (1)  
<p>|                 | • penicillin {is bactericidal / kills bacteria } (because the number of bacteria decreases) (1) | 2 |</p>

| 4(a)            | A description that makes reference to the following:  
• use of light (energy) to excite electrons in chlorophyll (1)  
• {photolysis / splitting of water} to produce oxygen, electrons and hydrogen ions (1)  
• electrons used { in the electron transport chain / to replace those lost by chlorophyll } (1)  
• generation of ATP / photophosphorylation (1)  
• reduction of NADP (1) | ALLOW electrons promoted to higher energy level  
ALLOW photosystem (PS) I or II for chlorophyll  
ALLOW correct equation  
ALLOW electrons used in redox reactions / electrons move along electron carrier proteins | 5 |
| 4(b)(i)         | 4(b)(i). The only correct answer is C – Stroma  
A is not correct because light-independent reactions take place in the stroma  
B is not correct because light-independent reactions take place in the stroma  
D is not correct because light-independent reactions take place in the stroma | 1 |

| 4(b)(ii)        | **4(b)(ii). The only correct answer is C – RUBISCO (ribulose bisphosphate carboxylase/oxygenase)**<br>  
A  is not correct because RUBISCO (ribulose bisphosphate carboxylase/oxygenase) is the enzyme that fixes carbon dioxide<br>  
B  is not correct because RUBISCO (ribulose bisphosphate carboxylase/oxygenase) is the enzyme that fixes carbon dioxide<br>  
D  is not correct because RUBISCO (ribulose bisphosphate carboxylase/oxygenase) is the enzyme that fixes carbon dioxide | 1    |
| 4(b)(iii)       | **4(b)(iii). The only correct answer is B – GP**<br>  
A  is not correct because glucose is made from the products of the light-independent reactions<br>  
C  is not correct because RuBP is the molecule that CO$_2$ combines with to form molecules of GP<br>  
D  is not correct because starch is formed from glucose | 1    |

| 6(a)(i)        | • correct values taken from the graph (1)  
• correct answer with correct units (1) | Example of calculation  
0.12 ÷ 2 =  
= 0.06 μmol dm⁻³ min⁻¹  
= 0.06 μmol per dm³ per minute  
or  
= 0.001 μmol dm⁻³ s⁻¹  
= 0.001 μmol per dm³ per second  
Correct answer with no units gains one mark  
Correct answer with correct units but no working gains full marks | 2 |
### Question 6(a)(ii)
- curve that is less steep but reaches the same plateau (1)

![Graph showing two curves with the same plateau but different slopes](image)

**Mark:** 1

### Question 6(a)(iii)
- An explanation that makes reference to the following:
  - the slower the initial rate of reaction the longer it will take for a clot to form (1)
  - because fibrin will be produced more slowly (1)

**Additional Guidance:** Allow converse arguments

**Mark:** 2

| *9(b)           | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme.  

The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant.  

- standardisation of composition of compost heaps  
- identification of species  
- abundance of each species of organism in the sample  
- determination of C:N / set up compost heaps with different C:N ratios  
- time e.g. days / intervals / repetition of sampling  
- other factors to monitor or control e.g. water / gases / humidity / temperature / aeration / mass  
- sampling technique e.g. location of sample within compost heap / repetition of sampling

<td><strong>Level 3</strong></td>
<td>5-6</td>
<td>An explanation of how the investigation should be modified is given which is supported throughout by evidence from the analysis, interpretation and/or evaluation of the scientific information. The explanation shows a well-developed and sustained line of scientific reasoning which is clear, coherent and logically structured.</td>
<td>Description of a suitable sampling technique Linking species present or species density to C:N measurements Use of a statistical test to compare changes of time / C:N ratio Use information on numbers of species and population sizes to demonstrate succession</td>
