GCSE
ADDITIONAL SCIENCE
BIOLOGY
Higher Tier   Unit Biology B2

Friday 10 June 2016   Morning   Time allowed: 1 hour

Materials
For this paper you must have:
• a ruler
You may use a calculator.

Instructions
• Use black ink or black ball-point pen.
• Fill in the boxes at the top of this page.
• Answer all questions.
• You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• The marks for questions are shown in brackets.
• The maximum mark for this paper is 60.
• You are expected to use a calculator where appropriate.
• You are reminded of the need for good English and clear presentation in your answers.
• Question 2 should be answered in continuous prose.
  In this question you will be marked on your ability to:
  – use good English
  – organise information clearly
  – use specialist vocabulary where appropriate.

Advice
• In all calculations, show clearly how you work out your answer.
There are no questions printed on this page
An athlete ran as fast as he could until he was exhausted.

1 (a) **Figure 1** shows the concentrations of glucose and of lactic acid in the athlete’s blood at the start and at the end of the run.

**Figure 1**

1 (a) (i) Lactic acid is made during anaerobic respiration.

What does anaerobic mean?

[1 mark]

_____________________________________________________________________________________

_____________________________________________________________________________________

1 (a) (ii) Give evidence from **Figure 1** that the athlete respired anaerobically during the run.

[1 mark]

_____________________________________________________________________________________

_____________________________________________________________________________________

**Question 1 continues on the next page**
1 (b) Figure 2 shows the effect of running on the rate of blood flow through the athlete’s muscles.

For how many minutes did the athlete run?

[1 mark]

Time = ________________ minutes

1 (b) (ii) Describe what happens to the rate of blood flow through the athlete’s muscles during the run.

Use data from Figure 2 in your answer.

[2 marks]

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
1 (b) (iii) Explain how the change in blood flow to the athlete’s muscles helps him to run. [4 marks]

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

Turn over for the next question
In this question you will be assessed on using good English, organising information clearly and using specialist terms where appropriate.

Light intensity, carbon dioxide concentration and temperature are three factors that affect the rate of photosynthesis.

How would you investigate the effect of light intensity on the rate of photosynthesis?

**Figure 3** shows some of the apparatus you might use.

---

You should include details of:
- how you would set up the apparatus and the materials you would use
- the measurements you would make
- how you could make this a fair test.

[6 marks]
3 Enzymes are made and used in all living organisms.

3 (a) What is an enzyme? [2 marks]

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

3 (b) Many enzymes work inside cells. In which part of a cell will most enzymes work? [1 mark]

Draw a ring around the correct answer.

cell membrane cytoplasm nucleus

3 (c) We can also use enzymes in industry.

Hydrogen peroxide is a chemical that can be used to preserve milk.

Adding a small amount of hydrogen peroxide to the milk kills the bacteria that cause decay. Hydrogen peroxide does not kill all disease-causing bacteria.

The enzyme catalase can be added later to break down the hydrogen peroxide to oxygen and water.

A different way of preserving the milk is by heating it in large machines to 138 °C for a few seconds.

Suggest one advantage and one disadvantage of using hydrogen peroxide and catalase to preserve milk instead of using heat treatment. [2 marks]

Advantage of hydrogen peroxide and catalase
_____________________________________________________________________________________
_____________________________________________________________________________________

Disadvantage of hydrogen peroxide and catalase
_____________________________________________________________________________________
_____________________________________________________________________________________

4 The stomach is an organ.

4 (a) To which organ system does the stomach belong? [1 mark]

The __________________________ system

4 (b) The stomach wall contains the following types of tissue:

• epithelial tissue
• glandular tissue
• muscular tissue.

4 (b) (i) What is the function of epithelial tissue in the stomach? [1 mark]

_____________________________________________________________________________________
_____________________________________________________________________________________

4 (b) (ii) Describe the functions of glandular tissue in the stomach. [3 marks]

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

4 (b) (iii) Describe how muscular tissue helps the stomach to function. [2 marks]

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

5 Figure 4 shows the production of human sperm cells.

**Figure 4**

- A: Cell growth, DNA replication
- B: Cell division
- C and D: Cell division
- E, F, G, and H: Sperm cells

5 (a) Name the organ where the processes shown in Figure 4 take place. [1 mark]

__________________________

5 (b) (i) Not every cell in Figure 4 contains the same amount of DNA.

Cell A contains 6.6 picograms of DNA (1 picogram = 10^{-12} grams).

How much DNA is there in each of the following cells? [2 marks]

- Cell B ___________ picograms
- Cell C ___________ picograms
- Cell E ___________ picograms

5 (b) (ii) How much DNA would there be in a fertilised egg cell? [1 mark]

______________________ picograms

5 (b) (iii) A fertilised egg cell divides many times to form an embryo.

Name this type of cell division. [1 mark]

__________________________
5 (c) After a baby is born, stem cells may be collected from the umbilical cord. These can be frozen and stored for possible use in the future.

5 (c) (i) What are stem cells? [2 marks]
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

5 (c) (ii) Suggest why it is ethically more acceptable to take stem cells from an umbilical cord instead of using stem cells from a 4-day-old embryo produced by In Vitro Fertilisation (IVF). [1 mark]
_____________________________________________________________________________________
_____________________________________________________________________________________

5 (c) (iii) Stem cells taken from a child’s umbilical cord could be used to treat a condition later in that child’s life.

Give one advantage of using the child’s own umbilical cord stem cells instead of using stem cells donated from another person. [1 mark]
_____________________________________________________________________________________
_____________________________________________________________________________________

5 (c) (iv) Why would it not be possible to treat a genetic disorder in a child using his own umbilical cord stem cells? [1 mark]
_____________________________________________________________________________________
_____________________________________________________________________________________

Turn over for the next question
Polydactyly is an inherited condition caused by a dominant allele.

Figure 5 shows the hand of a man with polydactyly. The man has an extra finger on each hand.

The man’s mother also has polydactyly but his father does not.

6 (a) (i) The man is **homozygous** for polydactyly.

Explain how the information given above shows that the man is **homozygous** for polydactyly.

[3 marks]

_____________________________________________________________________________________

_____________________________________________________________________________________

_____________________________________________________________________________________

_____________________________________________________________________________________

_____________________________________________________________________________________

_____________________________________________________________________________________

6 (a) (ii) The man marries a woman who does **not** have polydactyly.

What is the probability that their first child will have polydactyly?

[1 mark]

__________________________
6 (b) The man has red hair. His sister has brown hair.

Both of their parents have brown hair.

Brown hair is caused by the dominant allele, B.

Red hair is caused by a recessive allele, b.

Complete the genetic diagram below to show how the man’s parents were able to have some children with red hair and some with brown hair.

[5 marks]

Offspring phenotypes: ________________________

Turn over for the next question
Some students wanted to estimate the number of plantain plants in a grassy field. The field measured 100 metres × 50 metres.

The students:
- chose areas where plantains were growing
- placed 10 quadrats in these areas
- counted the number of plantains in each of the 10 quadrats.

Each quadrat measured 25 cm × 25 cm.

Table 1 shows the students’ results.

<table>
<thead>
<tr>
<th>Quadrat number</th>
<th>Number of plantain plants</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
<tr>
<td>4</td>
<td>1</td>
</tr>
<tr>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>6</td>
<td>2</td>
</tr>
<tr>
<td>7</td>
<td>4</td>
</tr>
<tr>
<td>8</td>
<td>1</td>
</tr>
<tr>
<td>9</td>
<td>1</td>
</tr>
<tr>
<td>10</td>
<td>1</td>
</tr>
</tbody>
</table>

Complete the following calculation to estimate the number of plantain plants in the field.

Use the students’ results from Table 1.

[3 marks]

Total number of plantains in 10 quadrats = ________________

Total area of 10 quadrats = ________________ m²

Mean number of plantains per m² = ____________

Area of field = ________________ m²

Therefore estimated number of plantains in field = ________________
7 (b) The students’ method would **not** give a valid estimate of the number of plantain plants in the field.

Describe **three** improvements you could make to the students’ method.

For each improvement, give the reason why your method would produce more valid results than the students’ method.

[3 marks]

Improvement 1 ____________________________

Reason ____________________________________

_____________________________________________________________________________________

Improvement 2 ____________________________

Reason ____________________________________

_____________________________________________________________________________________

Improvement 3 ____________________________

Reason ____________________________________

_____________________________________________________________________________________

Turn over for the next question
Figure 6 is a map showing a group of islands in the Pacific Ocean, near the coast of California, USA.

A species of fox, called the Island Fox, lives on each of the six islands shown in Figure 6.

Figure 7 shows an Island Fox.

The foxes on each island are slightly different from those on the other islands.

The Island Foxes are similar to another species of fox, called the Grey Fox.

The Grey Fox lives in mainland California.
| Question 8 continues on the next page |
Suggest why the Island Foxes have developed into different varieties of the same species instead of six different species.

[1 mark]
