Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students’ responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students’ scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students’ reactions to a particular paper. Assumptions about future mark schemes on the basis of one year’s document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk
**Information to Examiners**

1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the Examiner make his or her judgement and help to delineate what is acceptable or not worthy of credit or, in discursive answers, to give an overview of the area in which a mark or marks may be awarded
- the Assessment Objectives and specification content that each question is intended to cover.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example: where consequential marking needs to be considered in a calculation; or the answer may be on the diagram or at a different place on the script.

In general the right-hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Emboldening and underlining

2.1 In a list of acceptable answers where more than one mark is available ‘any two from’ is used, with the number of marks emboldened. Each of the following bullet points is a potential mark.

2.2 A bold **and** is used to indicate that both parts of the answer are required to award the mark.

2.3 Alternative answers acceptable for a mark are indicated by the use of **or**. Different terms in the mark scheme are shown by a / ; eg allow smooth / free movement.

2.4 Any wording that is underlined is essential for the marking point to be awarded.

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that ‘right + wrong = wrong’.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.
Example 1: What is the pH of an acidic solution?

<table>
<thead>
<tr>
<th>Student</th>
<th>Response</th>
<th>Marks awarded</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>green, 5</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>red*, 5</td>
<td>1</td>
</tr>
<tr>
<td>3</td>
<td>red*, 8</td>
<td>0</td>
</tr>
</tbody>
</table>

Example 2: Name two planets in the solar system.

<table>
<thead>
<tr>
<th>Student</th>
<th>Response</th>
<th>Marks awarded</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Pluto, Mars, Moon</td>
<td>1</td>
</tr>
<tr>
<td>2</td>
<td>Pluto, Sun, Mars, Moon</td>
<td>0</td>
</tr>
</tbody>
</table>

3.2 **Use of chemical symbols/formulae**

If a student writes a chemical symbol/formula instead of a required chemical name, full credit can be given if the symbol/formula is correct and if, in the context of the question, such action is appropriate.

3.3 **Marking procedure for calculations**

Full marks can be given for a correct numerical answer, without any working shown. However, if the answer is incorrect, mark(s) can be gained by correct substitution / working and this is shown in the ‘extra information’ column or by each stage of a longer calculation.

3.4 **Interpretation of ‘it’**

Answers using the word ‘it’ should be given credit only if it is clear that the ‘it’ refers to the correct subject.

3.5 **Errors carried forward**

Any error in the answers to a structured question should be penalised once only. Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation ‘ecf’ in the marking scheme.

3.6 **Phonetic spelling**

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.7 **Brackets**

(…..) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

3.8 **Accept/allow**

Accept is used to indicate an equivalent answer to that given on the left-hand side of the mark scheme. Allow is used to denote lower-level responses that just gain credit.
3.9 Ignore/Insufficient/Do not allow

Ignore or insufficient is used when the information given is irrelevant to the question or not enough to gain a marking point. Any further correct amplification could gain the marking point.
Do not allow means that this is a wrong answer which, even if the correct answer is given, will still mean that the mark is not awarded.

4. Quality of Written Communication and levels marking

In Question 3 students are required to produce extended written material in English, and will be assessed on the quality of their written communication as well as the standard of the scientific response.

Students will be required to:

- use good English
- organise information clearly
- use specialist vocabulary where appropriate.

The following general criteria should be used to assign marks to a level.

Level 1: Basic

- Knowledge of basic information.
- Simple understanding.
- The answer is poorly organised, with almost no specialist terms and their use demonstrating a general lack of understanding of their meaning, little or no detail.
- The spelling, punctuation and grammar are very weak.

Level 2: Clear

- Knowledge of accurate information.
- Clear understanding.
- The answer has some structure and organisation, use of specialist terms has been attempted but not always accurately, some detail is given.
- There is reasonable accuracy in spelling, punctuation and grammar, although there may still be some errors.

Level 3: Detailed

- Knowledge of accurate information appropriately contextualised.
- Detailed understanding, supported by relevant evidence and examples.
- Answer is coherent and in an organised, logical sequence, containing a wide range of appropriate or relevant specialist terms used accurately.
- The answer shows almost faultless spelling, punctuation and grammar.

**Examples of chemistry points made in the response could include:**

**Processes**
- quarrying
- drilling
- thermal decomposition
- combustion of fossil fuel
- use of explosives

**Types of pollution and problematic effects:**
- visual pollution
- noise pollution
- dust pollution
- destruction of land
- air / atmospheric pollution (methane, carbon dioxide, sulphur dioxide, NOx, particulates)
- water (rivers / lakes / seas) pollution
- earth tremors

**Environmental impacts:**
- destruction of areas of natural beauty
- disturbance of people and animals
- breathing problems or asthmatic attacks
- destruction of habitats or biodiversity or kills wildlife and plants
- (CH₄ ; CO₂ ) greenhouse gases → global warming → consequences
- (particulates) global dimming → consequences including breathing problems
- (SO₂ ; NOₓ ) acidic gas / rain → consequences including breathing problems
- damage to buildings / infrastructure

### Question 5(a)(i)
- **Any one from:**
  - all these gases / hydrogen / methane / water vapour / ammonia may not have been in the Earth's early atmosphere
  - the conditions of the reaction were not like those on early Earth
  - many different amino acids are needed for life processes

**Extra information:**
- Ignore no proof / evidence or no one was there or references to religion or meteorites / comets.
- Allow nobody knows what was in the Earth's early atmosphere
- Allow very little (0.5%) in the Earth's early atmosphere
- Allow nobody knows what the conditions were on early Earth
- Allow only simple amino acids / glycine were produced

**Mark:** 1

**AO / Spec. Ref.:**
- AO3 1.7.2d;e

### Question 5(a)(ii)
- **Any three from:**
  - used by plants / algae or for photosynthesis
  - absorbed / dissolved by oceans
  - locked up in sedimentary rocks / carbonates / limestone
  - locked up in fossil fuels

**Extra information:**
- Ignore volcanoes
- Allow stored in for locked up
  - mention of respiration: maximum two marks

**Mark:** 3

**AO / Spec. Ref.:**
