GCSE Chemistry

Unit 1

Foundation Tier

[GCM11]

GCM11

FRIDAY 27 MAY, MORNING

TIME

1 hour.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the boxed area on each page or on blank pages.

Complete in black ink only. **Do not write with a gel pen.**

Answer **all six** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 60.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Question **3(b)(i)**.

A Data Leaflet, which includes a Periodic Table of the Elements, is included in this question paper.

12893

16GCM1101

(b) Sodium reacts with water. The sodium floats and moves on the surface. It melts to form a silvery ball and eventually disappears, leaving a colourless solution.

(i) State two safety precautions which should be taken when adding sodium to water.

1. _____

2. _____

_____ [2]

(ii) Explain why sodium floats on water.

_____ [1]

(iii) Explain why sodium melts during the reaction.

_____ [1]

[Turn over

12893

16GCM1103

2 Neon is a noble gas and has three stable isotopes.

(a) An atom of neon is shown below.

(i) Write the electronic configuration of this atom.

_____ [1]

(ii) What is the mass number of this atom of neon?

_____ [1]

(iii) Complete the table below about the subatomic particles found in a neon atom.

Relative mass	Relative charge	Subatomic particle
$\frac{1}{1840}$		
	+1	
		neutron

[3]

(iv) Explain why this atom of neon is electrically neutral.

[1]

(b) The percentage abundance of the isotopes of neon are shown below.

Isotope	Percentage abundance /%
^{20}Ne	90
^{21}Ne	1
^{22}Ne	9

Calculate the relative atomic mass of neon.

Give your answer to 1 decimal place.

relative atomic mass = _____ [2]

[Turn over

16GCM1105

3 Salts may be prepared by reacting metals or metal compounds with acids. Some salts are hydrated.

(a) The word equations below show the formation of some salts.

Equation 1: potassium hydroxide + hydrochloric acid \rightarrow **substance A** + water

Equation 2: **substance B** + nitric acid \rightarrow copper(II) nitrate + water + carbon dioxide

Equation 3: zinc oxide + **substance C** \rightarrow zinc sulfate + water

(i) Name **substances A, B and C**.

A _____

B _____

C _____ [3]

(ii) Write the formula of copper(II) nitrate.

_____ [1]

(b) (i) Describe how a pure, dry sample of hydrated magnesium chloride may be prepared from solid magnesium carbonate and hydrochloric acid.

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.

[6]

(ii) Write a balanced symbol equation for the reaction between magnesium carbonate and hydrochloric acid.

[3]

4 (a) Chlorine reacts with sodium to form the ionic compound sodium chloride.

(i) Draw a dot and cross diagram to show how an atom of sodium reacts with an atom of chlorine to form sodium chloride. Include the charges of the ions formed.

[6]

(ii) The bonding in sodium chloride is ionic. What is meant by ionic bonding?

[1]

(b) Chlorine also reacts with hydrogen to form hydrogen chloride gas.

- (i) Balance the equation below for this reaction and insert the appropriate state symbols.

[2]

- (ii) Draw a dot and cross diagram to show the bonding in a molecule of hydrogen chloride. Only outer shell electrons need to be shown.

[1]

- (iii) Suggest the name given to a solution of hydrogen chloride in water.

[1]

[Turn over

5 Alloys have a variety of uses in preference to pure metals.

(a) Nichrome is an alloy of nickel and chromium often used to carry out flame tests on metal compounds. Nichrome is harder than nickel.

© Science Photo Library

(i) What is meant by the term alloy?

[2]

(ii) What is the name of the property which describes a metal being able to be drawn out into wires?

[1]

(iii) Explain, in terms of structure, why nichrome is harder than nickel.

[2]

(iv) Describe how a flame test is carried out using nichrome wire.

[3]

(v) Complete the table to give the flame test colour or the formula of the metal ion present.

Flame test colour	Metal ion present
brick red	
	Li ⁺
yellow/orange	

[3]

(b) The table below shows the composition of some alloys of gold. Complete the table.

Alloy of gold /carat	Percentage of gold /%
24	100
18	
	37.5

[2]

[Turn over

6 $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ contains water of crystallisation which may be removed by heating to constant mass.

(a) (i) What is meant by heating to constant mass?

[2]

(ii) What term is used to describe a substance which has had all of its water of crystallisation removed?

[1]

(b) (i) Calculate the relative formula mass (M_r) of $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$.

relative formula mass (M_r) = _____ [1]

(ii) Calculate the percentage of water of crystallisation in $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$.

Percentage of water of crystallisation = _____ % [2]

SYMBOLS OF SELECTED IONS

Positive ions

Name	Symbol
Ammonium	NH_4^+
Chromium(III)	Cr^{3+}
Copper(II)	Cu^{2+}
Iron(II)	Fe^{2+}
Iron(III)	Fe^{3+}
Lead(II)	Pb^{2+}
Silver	Ag^+
Zinc	Zn^{2+}

Negative ions

Name	Symbol
Butanoate	$\text{C}_3\text{H}_7\text{COO}^-$
Carbonate	CO_3^{2-}
Dichromate	$\text{Cr}_2\text{O}_7^{2-}$
Ethanoate	CH_3COO^-
Hydrogencarbonate	HCO_3^-
Hydroxide	OH^-
Methanoate	HCOO^-
Nitrate	NO_3^-
Propanoate	$\text{C}_2\text{H}_5\text{COO}^-$
Sulfate	SO_4^{2-}
Sulfite	SO_3^{2-}

Data Leaflet

Including the Periodic Table of the Elements

For the use of candidates taking
 Science: Chemistry,
 Science: Double Award
 or Science: Single Award

Copies must be free from notes or additions of any
 kind. No other type of data booklet or information
 sheet is authorised for use in the examinations

SOLUBILITY IN COLD WATER OF COMMON SALTS, HYDROXIDES AND OXIDES

Soluble
All sodium, potassium and ammonium salts
All nitrates
Most chlorides, bromides and iodides EXCEPT silver and lead chlorides, bromides and iodides
Most sulfates EXCEPT lead and barium sulfates Calcium sulfate is slightly soluble
Insoluble
Most carbonates EXCEPT sodium, potassium and ammonium carbonates
Most hydroxides EXCEPT sodium, potassium and ammonium hydroxides
Most oxides EXCEPT sodium, potassium and calcium oxides which react with water
