SCIENCE (Double Award)

Unit 4 – BIOLOGY 2 FOUNDATION TIER

TUESDAY, 15 MAY 2018 – AFTERNOON

1 hour 15 minutes

For Examiner's use only							
Question	Maximum Mark	Mark Awarded					
1.	8						
2.	4						
3.	9						
4.	7						
5.	11						
6.	6						
7.	7						
8.	8						
Total	60						

ADDITIONAL MATERIALS

In addition to this paper you may require a calculator and a ruler.

INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen. Do not use gel pen. Do not use correction fluid.

Write your name, centre number and candidate number in the spaces at the top of this page.

Answer all questions.

Write your answers in the spaces provided in this booklet.

If you run out of space, use the additional pages at the back of the booklet, taking care to number the question(s) correctly.

INFORMATION FOR CANDIDATES

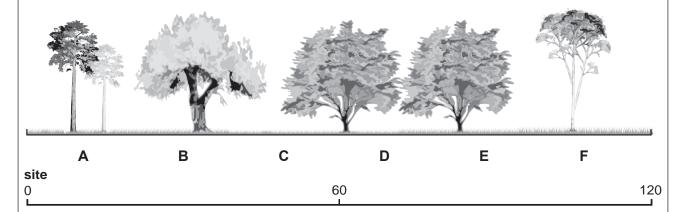

The number of marks is given in brackets at the end of each question or part-question.

Question 6 is a quality of extended response (QER) question where your writing skills will be assessed.

Answer all questions.

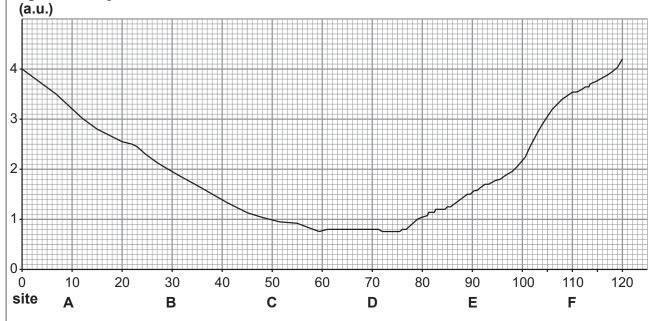

1. Ceri used a data logger to measure light intensity at six sites $(\mathbf{A} - \mathbf{F})$ along a 120 m transect through a wood, as shown below.

distance along transect (m)

The results below are shown on her computer screen.

light intensity

Distance along transect (m)

(i)	Describe how light intensity changes along the transect.	[2]
-----	--	-----

(ii) Ceri thought that light intensity affected the number of plant species growing under the trees along the transect.

She counted the number of plant species present at each site.

The results are shown in the table.

Site	А	В	С	D	Е	F
number of plant species in 1 m ²	9	8	2	1	3	11

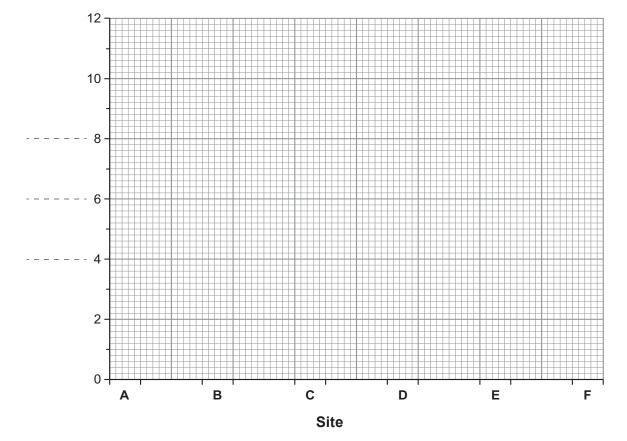

Complete a bar chart on the grid below by:

I. labelling the vertical axis;

[1]

II. using a **ruler** to draw bars for the number of plant species at each site. [2]

Turn over.

	4	75
(iv)	Do the results of the investigation support her hypothesis? Give a reason for your answer. [1]	Examin only
(v)	Apart from light intensity, suggest one <i>other</i> environmental factor that might affect the number of plant species growing under the trees. [1]	
		8

Erinaceus europaeus has many common names, such as hedgehog, urchin and furze-pig.

(a) State:

(i) the King	gdom to which the hedgehog belongs;	[1]
--------------	-------------------------------------	-----

(ii) the Genus name for the hedgehog. [1]

(b)	Explain wh	y scientists	use	the	scientific	name,	rather	than	common	names	for
	organisms.										[2]

• • • • • • • • • •

3. (a) (i) Complete the following sentences about sense organs using some of the words from the list below. [2]

impu	ılses	signs	stimuli	messages	signals
Sens	e organs resp	oond to specific		by sending	
inforr	mation in the t	form of		which are carried to	the central
nervo	ous system.				
State	the name of:				
I.	the specialis system;	ed nerve cells	that carry the in	formation to the cent	ral nervous [1]
II.	an organ tha	t processes info	ormation receive	ed from sense organs	. [1]

(b) Jed investigated the hearing of some year 11 pupils and their teachers.

He asked 12 pupils and 12 teachers to say if they could hear a buzzer when he sounded it at each of five distances away from the two groups. The same buzzer was pressed for each person.

The results are shown in the table.

(ii)

Distance from	Number hearing buzzer					
buzzer (m)	Year 11 pupils	Teachers				
5	12	12				
10	12	12				
15	12	12				
20	11	7				
25	8	2				

9	

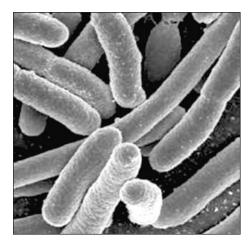

(i)	Give one conclusion that Jed can make from this investigation. [1	Examine only
(ii)	State one way in which Jed's investigation is a fair test. [1]
(iii)	What else should Jed have done to make sure the investigation was a fair test? [1]
(iv)	Jed thought that increasing the sample size would improve his confidence in his conclusion.	S
	Describe how Jed would increase the sample size in this investigation. Explain while it would improve his confidence in his conclusion.

The photograph shows bacteria called *E. coli*. 5. (a)

Bacteria such as *E. coli* can be pathogens.

Bacteria become resistant to antibiotics

(i)	State the meaning of the term <i>pathogen</i> .	[1]
(ii)	Describe two ways in which pathogens are spread from person to person.	[2]
Bact	rerial infections may be treated by antibiotics.	
(i)	State the name of one antibiotic.	[1]
(ii)	Which one of the following results from the over use of antibiotics? <u>Underline</u> the correct answer.	[1]
	People become immune to antibiotics	
	People become resistant to antibiotics	
	Bacteria become immune to antibiotics

(c) The table shows the number of two species of bacteria (A and B) in samples of seawater taken near a beach.

Date of sample	Number of bacteria	(thousands per cm ³)	Total number of species A and B
Date of Sample	Species A	Species B	(thousands per cm ³)
March 15 th	100	50	150
April 15 th	200	60	260
May 15 th	300	70	370
June 15 th	500	70	570
July 15 th	1000	80	1080
August 15 th	800	110	910
September 15 th	300	350	650

(i) The graph below shows how the total number of species **A** and **B** changed between March 15th and September 15th.

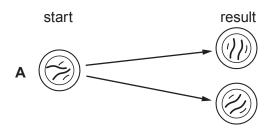

© WJEC CBAC Ltd.

		li di di di di di di di di di di di di di
	I.	Between which two sampling dates was the increase in the total number of species A and B the fastest?
		Between and
	II.	If the total number of species A and B in the sample is likely to be greater than 700 000 per cm ³ in any month, people are advised to stay out of the sea.
		A safety officer said:
		"On June 15 th , I decided to advise people to stay out of the sea until further notice."
		Explain why the safety officer made this decision, even though the seawater was safe on that date. [2]
(ii)	I.	Describe the trends shown in the table for the numbers of species A and B . [2]
		Species A:
		Species B:
	II.	Use your answer to part (I.) to explain why the sampling should continue into October. [1]

6. Mitosis and meiosis are two types of cell division.

Diagrams ${\bf A}$ and ${\bf B}$ show the start and result of both types of cell division in a cell with four chromosomes.

Use the diagrams and your own knowledge to describe the two types of cell division.

You should:

•	state which	diagram show	<i>'</i> s mitosis and	l which s	hows meiosis

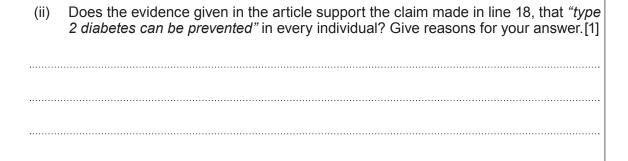

•	describe what you can see at the start and the result for each type of cell division	n	
•	give one function for each type of cell division	[6 QER]

7.	Read	I the	following article about diabetes.
1		imn You The	ype 1 diabetes, the cells of the pancreas that make insulin are destroyed by cells of the nune system. are more likely to develop it, if diabetes runs in your family. immune system may be triggered to act on the pancreas by a virus, pollutants, or ss causing type 1 diabetes.
6		insi	ype 2 diabetes, not enough insulin is produced or cells in the liver fail to respond to the ilin that is produced. It is more likely to occur if it runs in your family, but there are also eral risk factors.
		The	ese include:
			certain lifestyle choices certain ethnic origins age
16		of d	spite a rapid rise in the incidence of diabetes, there has been a 28% fall in the number eaths from diabetes-related conditions in Wales between 2009 and 2013. This shows been some success in how diabetes has been managed but early diagnosis is l.
		A s	pokesperson for a charity promoting diabetes awareness in Wales said:
			be 2 diabetes can be prevented, but there is no way of preventing type 1. Looking after rown health can reduce the risk of developing type 2 diabetes."
		Use	the above information and your own knowledge to answer the following questions.
	(a)	(i)	Give the reason why people at high risk of developing diabetes should be tested regularly. [1]

(ii)

	Explain one way in which "looking after your own health can reduce the risk of developing type 2 diabetes" (lines 18 & 19). [2]	(b)
•	Explain what would happen in the body if the "cells in the liver fail to respond to the insuling that is produced".	(c)
